

## GLOBALILLUMINATORS

**MARGI 2016**

### **Panel Discussion**

We welcome all participants to take part in the following panel discussion session. Participation of the entrance to panel session is free of cost if you have already registered for the conference.

**Leading Panelist:** Dr. **Abhishek Singh**, Executive Director PDI.

**Panel participants:** Dr. Aleskandr Bezgodov, Dr .Konstantin Barezhev, and Peter Pei.

### **Panel discussion Topic:**

**“Global World Crisis: From Problems to Solutions”**

Following ideas will be discussed in the panel discussion.

1. Globalization - a natural historical process that gave a lot of positive changes in the life of nations and peoples of the world. But something went wrong.

Why at the level of the second wave of globalization (the content of which is the planetary distribution of productive forces and production) began to have problems?

2. Integration of humanity at stake: How to get people back on the path of union?

According to the movement of the world community towards unity has suffered some serious blows:

- The global financial and economic crisis 2008 - 2010 period;
- new geopolitical challenges in 2014 and beyond.

How to find new powerful motives, ideas and values of the world of universal association?

3. The crisis of human values: They exist, but not all recognize them.

Someone sincerely and devotedly profess universal values, and someone they cynically uses.

## GLOBALILLUMINATORS

### MARGI 2016

Maybe a new universal code of values it be established that can unite people around the world? For example, around the idea of life, survival, self-preservation of the human species in the natural environment.

4. Ethics: what it is today - an anachronism (relic of the past), is practically useless a cultural artifact, naive consciousness just right for academics and romantics, or an effective tool for change of consciousness, self-awareness, attitudes and behavior of people? Can ethics be a guide and mentor for human being in the world?

Can there today, universal morality and ethics, not tied to any particular religion or ARE they separate state ideologies? Are they able to really transform a person, so that he ceased to destroy the world?

5. What should be the humanitarian innovations to provide us a smooth entry into the post-industrial world of the sixth technological order? Can and should the process of human changes to be controlled and purposeful? What are its goals?

7. Mass migration: People flee from home to foreign and alien to their country. They were driving home from war, famine, poverty, poor living conditions, unemployment, and political tensions. Europe is ready to close the border. How to make people become comfortable, safe and safely in their own countries? How to ensure the zone and point of growth in the economies of the poorest countries?

8. Future Technologies: What trends in the industry, agriculture, high-tech industries to bet? How successful innovations can be effectively implemented in developing countries? How to make available the fruits of progress for the world's poorest countries?
